

KISHAN VISHWAKARMA

Full Stack Developer | MERN
+91 8530209965 | kishanvishwakarma6414@gmail.com
unsignedcoder.vercel.app

Professional Summary

Senior-minded Software Engineer with strong full-stack experience building scalable, high-availability applications using React, Next.js, Node.js, and TypeScript. Skilled at translating product and business requirements into production-grade architectures, designing maintainable APIs, optimizing system performance, and delivering reliable user-facing platforms at scale. Experienced with distributed systems concepts, caching strategies, concurrency, observability, and automation-driven engineering workflows, with a strong focus on clean design, reliability, and execution speed.

Technical Skills

Frontend: React.js, Next.js, TypeScript, React Query, Redux, Tailwind CSS, shadcn/ui, Feature-Based UI Architecture

Backend & Runtime: Node.js, Rest APIs, Express.js, Worker Threads

Tools & Concepts: System Design, Load Balancing, Caching, CI/CD Pipelines, Responsive UI Design, Cross-Browser Compatibility, RBAC

Professional Skills: Technical Leadership, System Thinking, Debugging and Performance Optimization, Problem Solving, Analytical Thinking, Documentation & Reporting, Time Management

Database: MongoDB, PostgreSQL, Redis, NoSQL Databases

Tools: Git, GitHub, Postman, Vercel, Docker, Prisma

AI Tools & IDEs: ChatGPT, GitHub Copilot, Claude, Perplexity, Cursor, Visual Studio Code, Antigravity, UI Framework and Libraries

Work Experience

MERN Stack Developer – Codestudios

- Owned end-to-end delivery of full-stack product features, from requirement breakdown and technical planning to production rollout.
- Engineered scalable frontend experiences with React.js and Tailwind CSS, improving usability, responsiveness, and maintainability.
- Designed and implemented production-ready REST APIs with Node.js and Express.js, emphasizing clean contracts and long-term extensibility.
- Optimized MongoDB and Postgres data models and backend flows for efficient querying, reliability, and operational simplicity.
- Strengthened platform security by implementing JWT-based authentication and authorization patterns.
- Supported production systems, resolved live issues quickly, and improved service reliability through debugging and iterative performance tuning.

Projects

Scalable Load-Balanced URL Shortener

Fastify, PostgreSQL, Redis, Docker, Docker Compose, Vite, Vanilla JavaScript

- Architected a scalable load-balanced URL shortener using microservices principles to support high throughput and resilient request handling.
- Integrated Redis caching and PostgreSQL to reduce latency, preserve consistency, and improve performance under concurrent traffic.

- Containerized distributed services with Docker and Docker Compose, applying load-balancing and system design patterns for operational reliability.
- Built a lightweight frontend with Vanilla JavaScript and Vite to enable fast, responsive, and low-overhead user interactions.

DataEngine (CSV & PDF Processing System)

Node.js, Express.js, React, MongoDB, Worker Threads, WebSockets

- Built a full-stack file processing platform for generating and processing large CSV and PDF workloads reliably at scale.
- Implemented parallel execution with Node.js worker threads to split heavy workloads into chunks and process them concurrently.
- Designed a custom WorkerPool to improve task distribution, CPU utilization, and throughput efficiency.
- Developed real-time telemetry with WebSockets to track progress, worker activity, and failure states.
- Ensured reliable file reassembly and data integrity across parallel execution pipelines.

Education

B.Sc Computer Science

Viva College, Mumbai University

Jun 2022 – Apr 2025

CGPA: 7.5

Diploma in Web Development

Comtech IT World

Jun 2022 – Jul 2023

Languages

English, Hindi, Marathi

Additional Information

- Thrive in fast-paced collaborative environments and consistently meet deadlines.
- Use AI-assisted workflows to accelerate development, improve productivity, and stay current with emerging technologies and tools.
- Continuously explore modern frameworks, architecture patterns, and engineering best practices.
- Strong interest in backend architecture, distributed systems, Docker, and DevOps-oriented workflows.
- Delivered features improving load times by 30%, increasing user engagement by 40%, and reducing production defects by 25%.
